

Cordially welcome at the ökoEnergiewelt!  
Cordially welcome at the European Centre of Renewable Energies!

In cooperation with the ökoEnergiewelt and the European Centre of Renewable Energies (ECE) a lot of energy production plants were constructed – from the district heating plant, photovoltaic plant over the biogas plant to the worldwide unique biomass plant in Güssing. All aspects of renewable energy are covered by this way. With the so-called „Model of Güssing“, the city became self sufficient in the field of heat and electricity.

We go one step further, because there is also research in Güssing – synthetic natural gas out of wood, fuel and diesel out of wood. Sounds utopian? In Güssing it is already reality!

Experience the future now ...

In the context of a visit in Güssing you can get to know the “Model of Güssing” and visit the demonstration plants at the ökoEnergiewelt.

### **The following points of program are available:**

#### **Presentation Model of Güssing**

Length: approx. 60 min.

Location: Centre of technology Güssing

Content: Here you experience a concrete presentation how Güssing managed it to supply themselves with heat and electricity out of renewable energies. Furthermore we give you a forecast about future technologies on the area of renewable energies. Depending on the interest we offer different lecturers.

Languages: German/English/Hungarian/Slovak

#### **Visit of one or more demonstration plants**

Following the presentation you get the possibility to witness very close how renewable energy is produced.

You can choose:

- the Biomass Plant Güssing (length approx. 30min.)
- the District Heating Plant Güssing (length approx. 20min.)
- the photovoltaic plant and the solar school Güssing (length approx. 30min.)
- the District Heating Plant Urbersdorf (combined with solar) (length approx. 20min.)
- the Biogas Plant Strem (length approx. 30min.)

Our especially educated tour guides accompany you at the presentation and at the visit of the plants.

Languages: German/English/Hungarian/Slovak

The costs of energy in your community are rising and rising? The percentage of fossil energy sources is still too high? You want to change to renewable energies with your community but you don't know how?

With the help of energy developing plans, which the EEE offers for communities and regions according to the „Model of Güssing“, it should work to change your energy system for long-term to renewable energy sources.

We offer you an adapted program for your needs.

Benefit from our experts experiences.
